**Dr. Martí Gich** is lecturer of the Master in Advanced Nanoscience and Nanotechnology of Universitat Autònoma de Barcelona and currently holds a permanent position of researcher at the Materials Science Institute of Barcelona ([www.icmab.es](http://www.icmab.es)), which belongs to the Spanish research council ([www.csic.es](http://www.csic.es)) and recognized as one of the top institutes in Spain by the "Severo Ochoa Centers of Excelence" label. He is a member of the Group of Nanoparticle and Nanocomposites (<http://departments.icmab.es/nn/>). His work focuses primarily on the understanding the structure-properties relationships in functional oxides and the preparation of nanoparticles in porous matrices and thin films. He has successfully supervised the PhD Thesis of the former CSC fellow Dr. Pengfei Niu (2012-2015) and is currently supervisor of the CSC fellow Zhang Qianzhe (PhD defense in September 2019) and Zheng Ma (PhD defense in September 2020).

### **CURRENT RESEARCH INTERESTS:**

I define myself as a materials scientist interested in the synthesis and understanding of functional materials through the study of structure-properties relationships. Specifically, my current research is focused into two main topics:

- I- **Preparation of functional oxides for applications.** The goal is to achieve significant advances in the preparation of oxides on supports compatible with its integration into devices. A first research line deals with the sol-gel synthesis of functional oxides on Si. A second line in this topic is the preparation of metal oxides based in  $\epsilon$ -Fe<sub>2</sub>O<sub>3</sub> in form of thin films for magneto-optical, magnetic and magnetoelectric applications.
- II- **Technological applications of porous nanocomposite materials.** This research topic aims at exploiting my expertise in this type of systems in a context of highly applied research in close collaboration with industry. Specific examples are i) the development of porous carbon/nanoparticle composites as electrodes in electrochemical sensors for the semi-continuous monitoring of water contaminants and ii) the development of mesoporous silica/metal oxide nanocomposites for drug delivery and medical imaging applications.

**FORMER RESEARCH INTERESTS:** Metallic glasses, nanocrystalline alloys and glass-ceramics.
